

# Managing Instances in Cloud1.live

This guide provides detailed steps for managing EC2 instances within the Cloud1.live application. The actions include starting, stopping, cloning, and more, with support for both single and multi-account views depending on your license.

## Features Overview

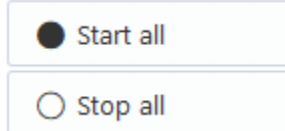

### 1. Instance Actions:

- **Start/Stop:** Initiate or stop EC2 instances.
- **Reboot:** Restart instances.
- **Terminate:** Permanently delete instances.
- **Clone:** Create a new instance using the same configuration as the selected instance in the same VPC.

### 2. Bulk Operations:

- **Multi-Select Commands:** Select multiple instances to perform a command.
- **Start/Stop All:** Perform bulk operations from the left menu.

### 3. Visual Indicators:

- **Green:** Instance is running.
- **Red:** Instance is stopped.
- **Light Grey:** Instance is terminated.
- **Grey:** Instance is in transition (starting, stopping, terminating, or pending).

### 4. Table Interaction:

- **Sort:** Click column headers to sort instances.
- **Filter (Pro Only):** Filter instances by account using the top console filter.
- **Search:** Type an instance name in the search bar, press the magnifier, and select from the dropdown to highlight it in the table.

## License-Specific Instructions

### 1. Trial/Standard License

- **Single Account Access:**
  - All instances in the account are displayed in the table.
  - The context menu provides **Start**, **Stop**, **Reboot**, **Terminate**, and **Clone** actions.
  - Use the search bar to locate instances.

#### **Managing Instances:**

##### 1. **Start an Instance:**

- Right-click on an instance in the table.
- Select **Start** from the context menu.

##### 2. **Stop an Instance:**

- Right-click and select **Stop**.

##### 3. **Clone an Instance:**

- Right-click on an instance and select **Clone**.
- The cloned instance will appear in the same VPC and adopt the configuration of the original instance.

##### 4. **Bulk Operations:**

- Select multiple instances (Ctrl+Click or Shift+Click).
- Right-click and choose the desired action.
- Or, use **Start All/Stop All** in the left menu for bulk commands.

### 2. Pro License

- **Multi-Account Management:**
  - Includes an **Account** column in the table.
  - Filter instances by account using the dropdown at the top of the console.

### **Additional Features:**

#### **1. Account Filtering:**

- Click the account filter at the top of the console.
- Select a specific account to narrow down instances.

#### **2. Search Across Accounts:**

- Use the search bar to locate an instance by name.

### **Managing Instances:**

- Follow the steps outlined in the Trial/Standard section with the additional benefit of filtering by account for streamlined management.

### **Notes:**

- **Error Indicators:** Errors during operations will appear in the status bar.
- **Loader Animation:** Displays progress during background actions.
